DROUGHT

PREPAREDNESS

U.S. DROUGHT MONITOR

July 26, 2022

Intensity:

- None
- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

Drought Impact Types:

- ~ Delineates dominant impacts
- S = Short-Term, typically less than 6 months (e.g. agriculture, grasslands)
- L = Long-Term, typically greater than 6 months (e.g. hydrology, ecology)

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary.

Author: Curtis Riganti

With much of the Western United States in the grip of a severe drought, many livestock producers are already experiencing **HAY SHORTAGES** due to these widespread conditions. Water supplies are dwindling as a decades-long **MEGA-DROUGHT** continues to dry up substantial water sources, including some of the nation's largest reservoirs.

Under abnormally dry conditions, hay supplies diminish, and **HAY QUALITY DECLINES**. With drought-stricken areas having less grazing pasture, **HAY COSTS INCREASE** across the country as demand exceeds supply. Many livestock owners are scrambling to purchase whatever hay is available now to feed their herds during the upcoming winter months when hay reserves shrink even more.

With hay prices rapidly increasing and a potential hay shortage looming, now's the time to stock up on Chaffhaye **NON-GMO ALFALFA**. Our compressed bags take up far less space than hay bales, are easy to handle, and provide an extended storage life.* We chop and package our product at **50% MOISTURE** to preserve essential nutrients generally lost in dry hay. Meanwhile, anaerobic cultivation takes place inside each air-tight bag producing highly beneficial **ENZYMES** and **PROBIOTICS**. Chaffhaye's cultured end product improves digestion, increases nutrient absorption, and provides health benefits well beyond the fundamental nutrition of the forage.

*Sealed weather-proof bags can be stored inside or outside.

EASY TO DIGEST
PROBIOTIC FORAGE
FOR ALL GRAZERS
AND BROWSERS
